

The Concorde Fold

Imagine a diagonal line running from top left to bottom right

Fold the bottom left corner to the centre

Then the bottom right corner to make a point

Fold the left side in again to make it narrower

Then the right side so you have a narrow triangle

Fold the bottom up to adjust the length of the nappy

Place the baby on the nappy and pull the bottom of the nappy up

Bring the front up and over baby

Bring one wing around the baby to the front

And then the other one

Fasten with a nappy nipper. At the moment the legs are loose and can let poo escape

Roll the fabric into the legs, like the edge of a pasty

And then the other one, this will give much better containment

Before adding a waterproof wrap and admiring the amazing job you've done
